WORK EXPERIENCE

iOS Developer @ DJiT/edjing

Since September 2012 - Boulogne-Billancourt, France

DJiT is an innovative start-up developing musical and social apps and hardware. It's flagship application, edjing, is a leader in mix applications and reached 25 millions downloads in early 2015.

On a team of five developers, I am in charge of:

- Developing edjing and edjing Pro on iOS. This includes the development of an iPad version, WatchKit extensions and continuous work to enhance the application on all devices and build new features.
- Developing and maintaining the other musical applications of DJiT, including Equalizer+ and BassBoost, both released in 2014.
- Integrating and promoting internally Apple's software and hardware innovations, including Apple Watch, regular OS releases and associated features.
- Researching for yet unreleased projects and applications, in various fields, including connected objects, visual effects on music or data parsing.
- Reviewing projects and specifications, to check that they are ergonomic and conform with Apple guidelines.

Technologies: *Objective-C, Cocoa Touch, Swift, C, Cocoa*

iOS Development Speaker

@ University Pierre and Marie Curie (UPMC)

Since February 2015 - Paris, France

Alongside my work at edjing, I teach iOS development to bachelor students following a professional course.

The unit introduces mobile development on iOS with Swift or Objective-C, in the context of recent development technologies. This includes a server-side (web development, API conception) and a client-side (iOS app) section.

Technologies: *Objective-C, Swift, Cocoa Touch*

Web Developer @ Fantasy.fr

September 2011 to August 2012 - Paris, France

Fantasy.fr is a news website about Sci-Fi and Fantasy. It is affiliated to Bragelonne, a well-known French editor of this genre of literature. In 2011, Fantasy.fr had an audience of 160 000 unique visitors per month.

In collaboration with the chief editor, I worked on the development of the website. My key projects were the creation of an automated newsletter, the deployment of a blog platform and a complete visual enhancement of Fantasy.fr.

Technologies: *PHP, HTML, CSS, JavaScript, LAMP server administration*

SKILLS

Programming

Native development

- Objective-C (Strong knowledge, 3+ years of active practice)
